

1837. a. ilmus teine köide, mille kirjastaja andis välja ilma Baeri loata. Sel ajal korraldas Baer ekspeditsiooni Novaja Zemljale, tema huvid olid kaldunud füüsilisele geograafiale.

The second volume was published without approval of the author in 1837. In same year Baer organised an expedition to Novaja Zemlja and he took more interest in physical geography.

K.F. Burdach's editing of *Fysiologia kui empiiriline teadus* (published as *Die Physiologie als Erfahrungswissenschaft*) led Baer to write articles on the development of the embryos of the chicken and the frog.

For *Die physiologie als Erfahrungswissenschaft* (edited by K.F. Burdach) Baer wrote articles on the development of the embryos of the chicken and the frog.
